

Domestic Loop System (DLS) Accessories

The Ampetronic DLS is suitable for use in the home or office, wherever you might need to hear entertainment, communications or alarms. The amplifier can be installed in any indoor environment and used wherever you want to be.

The Ampetronic DLS transmits sound directly to a hearing aid or receiver as safe and invisible magnetic waves. The sound can be received when the user is within a loop, which can be very small – as small as a single chair or sofa – or which can be around a room or area up to 5 x 6m or 30m². A larger room or area can be used if a lower signal strength is acceptable which will depend greatly on your hearing aids or receiver. A range of accessories is available to extend the flexibility of your DLS system, as shown below.

33m Roll Wire

33m Roll Wire

The 33 metre Roll Wire is perfect for laying a perimeter loop in a domestic location such as your home living room. The wire itself comes as part of the Domestic Loop System kit and is available to order separately, it is TRI RATED and exceptionally high quality.

A loop pad designed for permanent installation under a desk or counter is also available on request [Part Number GE00022].

Telephone Adaptor Kit

Telephone Adaptor Kit

Allows use of your telephone with confidence. Connected to the DLS priority input, you will never miss a call. Full isolation to international safety standards, for operation with any network with excellent sound quality. To connect between telephone wall outlet and the telephone, or between telephone and handset.
